ABSTRACT

For the third year in a row, Hofstra University has cooperated with the American Council on Education (ACE) in their survey of freshmen. Responses to almost all the questionnaire items by Hofstra freshmen over the last 3 years are included in this report. Hofstra students followed the national trends on several items: expectations about graduate and professional schools, attitudes towards women, liberalized attitudes about campus policies and middle-of-the-road political orientation. Analysis of responses about major and career considerations leads to the following statements: There are larger percentages of freshmen at Hofstra who plan to major in business or education; expect to be more successful that most; expect to find jobs in their own fields after graduation; think benefit of college is monetary; see themselves as stable about major or career and think it unlikely that they will seek vocational quidance. The data in this report is presented in statistical tables. (Author/PG)

For the third year in a row, Hofstra University has cooperated with the American Council on Education (ACE) in their survey of freshmen. The Student Information Form (SIF) is the survey instrument and is "revised annually to reflect the changing concerns of the academic community." This year is the eighth year ACE has conducted this survey. The normative data this year is based on the returned questionnaires of almost 190,000 freshmen enrolled in 360 institutions. (Almost twice as many freshmen and institutions cooperated in the survey but many were not included in the norms because their returns were not representative of the entire freshman class in that institution.)

Responses to almost all the questionnaire items by Hofstra freshmen over the last three years are included in this report. This year several additional sets of national norms are reported. We continue to present the national norms for all 4-year colleges. (Hofstra was assigned to this category by ACE.) This year for the first time, ACE prepared and published additional national norms based on the selectivity of the college. In Hofstra's attempt to understand its place relative to other 4-year private non-sectarian colleges that may be more selective, we have decided to include these norms. The selectivity definition is based on average combined SAT scores. Hofstra was assigned to the medium category (1000-1149). We show that norm, as well as high (1150-1249) and very high (1250 or greater) selectivity.

All data are reported as percentages to the nearest whole number. An item that was omitted from this year's questionnaire is not included in the report.

We follow the procedure of the two preceding years by quoting from the Chronicle of Higher Education, the February 11th edition, those highlights from the national sample that point to long term trends since our data permits only 3 years' worth of comparisons:

- -enrollment of blacks and members of the minority groups in college and universities appears to be losing momentum.
- -more freshmen expect to go on to graduate or professional study.
- -high school grades of freshmen are higher than previously.
- -average income of parents continued to increase.
- -majority (for first time) consider themselves "middle-of-the-road" politically.
- -students are revising their attitudes toward women.
- -past trends toward liberalized attitudes about campus policies continued.
- -support for the legalization of marijuana continued to increase.

We would now like to direct your attention to some trends among Hofstra freshmen. We will not discuss all the specific comparisons in the table, leaving it to the reader to make those comparisons in which he is interested. Hofstra students followed the national trends as mentioned above on several of the eight items; expectations about graduate and professional schools, attitudes towards women, liberalized attitudes about campus policies and middle-of-the-road political orientation. On the latter, the most selective schools have fewer middle-of-the-roaders and more liberals.

There are other interesting differences when comparisons are made with high and very high selectivity colleges. At Hofstra, the percentage of fathers and mothers with college degrees and over, and the percentage of students with "A" average grades in high school are lower at Hofstra than at other more selective colleges, although the percentage expecting to make at least a "B" average in college is higher.

Analysis of responses about major and career considerations leads to the following statements. There are larger percentages of freshmen at Hofstra who plan to major in business or education; expect to be more successful than most; expect to find jobs in their own field after graduation; think benefit of college is monetary; see themselves as stable about major or career and think it unlikely that they will seek vocational guidance than at the more selective colleges. But there are smaller percentages seeking careers that will provide the opportunity to contribute to society, to help others, or to be independent.

In essence, then, Hofstra freshmen are more likely to check "success" type reasons for choosing careers than "altruistic" type reasons than freshmen at more selective colleges.

They are often about as liberal about campus policies and social issues as highly selective schools but not as liberal as freshmen at very highly selective schools. Fewer see themselves becoming community leaders or developing a philosophy of life or being able to change society.

Their views about their college are also different; a smaller percentage of freshmen at Hofstra expect to be satisfied with their college and a smaller percentage select Hofstra because it has a good reputation (academic) than at high and very high selectivity colleges.

Financially, Hofstra freshmen are also different from freshmen at the more "prestigious" schools; the percentage estimating parental income at \$10,000-\$19,000 is higher and the percentage estimating it at \$30,000 or over is lower. As far as supporting oneself through college - at Hofstra a larger percentage expect to work at an outside job; a smaller percentage expect \$1,000 and more in support from their families; a smaller percentage received scholarships of \$1,000 and over; and a larger percentage expect to borrow \$1,000 and over than at the more selective colleges.

The proportion of commuters among the freshmen is much greater and conversely, the proportion of dorm residents is much smaller than at the more selective colleges.

Other norms, as well as data for Hofstra's male and female freshmen separately, are available at our office. New College data are not presented in this report because of lack of space.
